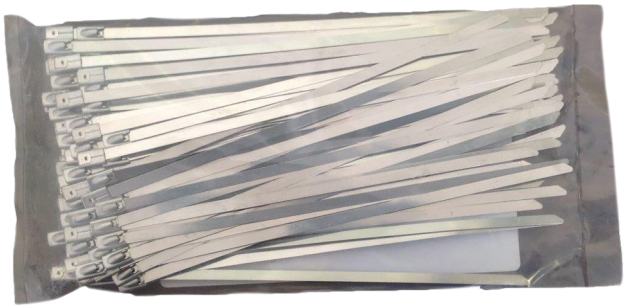
DF860

Plastic tiewrap for microphonic cable, 1000 pcs

Product overview

UV-resistant nylon tie wraps are used to secure the cable to the fence fabric. For standard chain link fencing cable ties are fastened to the fence and cable at 25 to 30 cm intervals. Please refer to the manual for other types of fences or for information on varying cable tie spacing. A single bag of UV-resistant tie wraps is sufficient for installing one entire 150 m of sensor cable.



Details

- Quick and easy to install
- UV-resistant
- Outdoor
